Education

Louisiana State University A&M – BS in Information Systems & Analytics – Expected December 2026

CompTIA Security+ ce (August 2025) | **CompTIA Network+ ce** (June 2025) | **AWS Cloud Practitioner** (May 2026)

Experience

Technology Director, Louisiana Association of Public Adjusters – Remote December 2025 – Present

- Administered Microsoft 365 tenant and DNS infrastructure across GoDaddy and Flywheel — user provisioning, mailbox management, and SPF/DKIM/MX configuration.
- Built a staging-to-production deployment workflow with compatibility testing and rollback, reducing risk of breaking changes on the live association site.
- Configured a multi-tier role-based access control (RBAC) system on the membership platform, mapping membership levels to distinct permission scopes.
- Enforced SSL/TLS across all web properties and served as primary technical contact for infrastructure decisions, vendor coordination, and end-user support.

IT Support Technician I, LSU AgCenter – Baton Rouge, Louisiana January 2024 – Present

- Deployed 150+ Windows endpoints during an enterprise PC refresh using Dell Image Assist for automated OS and application provisioning.
- Responded to the CrowdStrike BSOD incident affecting 250+ endpoints as part of the response team, restoring operations within hours through manual remediation.
- Troubleshoot network issues across VPN, DNS, DHCP, wireless, and Active Directory replication using systematic root-cause analysis.
- Enforced MFA across staff accounts, investigated phishing escalations, and authored support documentation that reduced ticket resolution time.

Skills

Cloud: AWS (EC2, EKS, ECR, IAM, VPC, S3), Azure (Entra ID, Compute, Storage, Functions, CosmosDB)

Infrastructure as Code & Config: Terraform (modules, remote state), CloudFormation

Containers & CI/CD: Docker, Kubernetes, Helm, Jenkins, Github Actions, Git

Systems & Networking: Linux, Windows Server, Active Directory, Microsoft 365, PowerShell, Bash, VMware, DNS/DHCP, VPN, IPsec, SSL/TLS, MFA, RBAC, Firewall Configuration

Projects

CI/CD Pipeline to Amazon EKS with ECR | [GitLab](#) | *AWS EKS, AWS ECR, Jenkins, Docker, Kubernetes, Java, Maven*

- Built a 5-stage CI/CD pipeline versioning, building, and deploying a Java Maven application from commit to a live EKS cluster via Jenkins, ECR, and Kubernetes manifests.
- Implemented dynamic image tagging and automated Git version commits with pipeline guards to prevent CI build commit loops.

Modular AWS Infrastructure Provisioning with Terraform | [GitLab](#) | *Terraform, AWS (VPC, EC2, IAM, S3), Docker*

- Provisioned a full AWS environment — VPC, subnets, route tables, internet gateway, EC2, and security groups — via modularized Terraform supporting multi-environment deployments.
- Configured Amazon S3 as a remote backend for shared Terraform state management.

Production Microservices Deployment on Kubernetes | [GitLab](#) | *Kubernetes, Helm, Linode LKE, Redis, Linux*

- Deployed an 11-service microservices application to a managed Linode LKE cluster, configuring replica sets, resource limits, and liveness/readiness probes across HTTP, TCP, and exec protocols.
- Diagnosed and resolved deployment failures across three distinct layers — YAML validation, image pull, and runtime — using systematic kubectl-based root-cause analysis.
